One-Dimensional Consolidation Analysis of Viscoelastic Saturated Soil Under Cyclic Loadings Using Fractional Derivative Burger Model

0 References

Rim, S; Kim, P; (...); Kim, KS

May 2026 (Early Access) | INDIAN GEOTECHNICAL JOURNAL

A number of onshore and offshore infrastructures such as highways, airports, railways, silos or tanks, tidal embankment and ocean banks are built on soft ground soil which reveals a long-term creep deformation in many cases. Moreover, the operation process of those infrastructures induces complic

Radial Consolidation of Unsaturated Soil with Vertical Drains Considering Well Resistance Under Different Waveforms of Time-Dependent Loading

0 References

Kim, P and Myong, HB

May 2026 (Early Access) | INDIAN GEOTECHNICAL JOURNAL

Many infrastructures have been built on unsaturated soft soil improved by vertical drains, and the soil ground maybe subjected to various waveform loadings. However, previous investigations into the radial consolidation behavior of unsaturated soil have neglected the well resistance in vertical d

3 **Article**

Nonlinear consolidation analysis of saturated multi-layered soil with continuous drainage boundary

Kim, P; Kim, YG; (...); Ri, KS
Nov 2023
| INTERNATIONAL JOURNAL FOR NUMERICAL AND ANALYTICAL METHODS IN GEOMECHANICS 47(16), pp.3114-3126

Continuous drainage boundary is widely accepted to overcome the shortcoming of the traditional assumption of fully permeable or impermeable drainage boundary in consolidation theories. This study presents an analytical solution for one-dimensional small-strain nonlinear consolidation of

Ranking Mountainous Geoheritages with the 3A Approach (Attraction, Accessibility, and Amenity)

Kim, C; Ma, J; (...); Kim, P
Mar 2023 | GEOHERITAGE 15(1)

A tourist destination (country or region) may have several or many geoheritages. Some of them might have similar characteristics whereas the others might be completely different from one another. Therefore, in today's limited temporal environment, the tourists for the purpose of geotourism may

Free Vibration Analysis of Bulkhead-Stiffened Functionally Graded Open Shell Using a Meshless Method

Kwak, S; Kim, K; (...); Kim, P
Sep 1 2022 | SHOCK AND VIBRATION 2022

This paper focuses on the free vibration analysis of bulkhead-stiffened functionally graded open shell (FGOS) by means of the first-order shear deformation theory (FSDT) and the meshless strong form method. The bulkhead-stiffened FGOS is decomposed into several segments without bulkhead, and

Influence of seawater intrusion on the hot springs in a coastal area: The case of the Anak-Sinchon Uplift, Korean Peninsula

0
References

Ri, M; Guo, HM; (...); Ri, G
Apr 2022 | JOURNAL OF HYDROLOGY 607

Temperatures and chemical compositions of hot springs are decisive of their roles in heating, power-generation, therapeutic applications and recreational activities. However, the influence of seawater intrusion on hot springs are still not fully understood. Typical ten hot springs in and around t

Analytical Solution for One-Dimensional Nonlinear Consolidation of Saturated Double-Layered Soil Subjected to Cyclic Loadings

2
Citations
0
References

Kim, P; Pak, CU and Myong, H
Nov 9 2021 | JOURNAL OF ENGINEERING 2021

Cyclic loading-induced consolidation behavior of soft soil is of great interest for the analysis of offshore and onshore structures. In this study, an analytical solution for one-dimensional (1D) nonlinear consolidation of saturated double-layered soil under various types of cyclic loadings such

0
References

Kim, YG; Jo, MB; (...); Rim, HM
Nov 1 2021 | JOURNAL OF WATERWAY PORT COASTAL AND OCEAN ENGINEERING 147(6)

This article introduces an effective flood control method in the downstream of a river through the optimal operation of a barrage that is connected with a sea. A new operating model for flood control of an estuary barrage that can comprehensively evaluate the intensive discharge through the flood

Nonlinear consolidation analysis of soft soil with vertical drains considering well resistance and smear effect under cyclic loadings

32
Citations
0
References

Kim, P; Kim, TC; (...); Jon, SH
Oct 2021 | GEOTEXTILES AND GEOMEMBRANES 49(5), pp.1440-1446

In this paper, the nonlinear consolidation behavior of soft soil with vertical drains considering well resistance and smear effect under cyclic loadings was investigated. Using the variables separation method, a series of analytical solutions were derived to calculate the excess pore water pressu
